It is the end of the school year. Below you can find your math grade for each of the four terms of the school year.

Term 1	Term 2	Term 3	Term 4
85	82	88	90

1.) Find the mean of all four terms. Mean = \_\_\_\_\_

2.) Use each of the four numbers lines to find how far each term's average is away from the mean.

Term 1: \_\_\_\_\_ 

Term 2: \_\_\_\_\_ 

Term 3: \_\_\_\_\_ 

Term 4: \_\_\_\_\_ 

3.) Find the mean absolute deviation. MAD = \_\_\_\_\_

### Core Lesson

Find the mean absolute deviation.

How many siblings do you have?

$$\begin{array}{r} 2 \\ 2 \\ 2 \\ 1 \\ 1 \\ 0 \\ 0 \\ 0 \\ 1 \\ 2 \\ 3 \\ + 3 \\ \hline 18 \end{array} \quad 18 \div 12 = 1.5$$

#### MEAN ABSOLUTE DEVIATION

1.) Five quarterbacks threw interceptions. The table below shows how many interceptions each of them threw.

Peyton Manning	Tom Brady	Robert Griffin III	Aaron Rodgers	Drew Brees
8	2	5	7	3

2.) The mean of all five numbers in the set is 6.

3.) Find how far each quarterback's interception numbers are away from the mean.

Peyton Manning 8 interceptions. Place a point on 8. How far is Peyton Manning's number away from the mean? \_\_\_\_\_

Tom Brady threw 2 interceptions. Place a point on 2. How far is Tom Brady's number away from the mean? \_\_\_\_\_

Robert Griffin III threw 5 interceptions. Place a point on 5. How far is Robert Griffin III away from the mean? \_\_\_\_\_

Aaron Rodgers threw 7 interceptions. Place a point on 7. How far is Aaron Rodgers away from the mean? \_\_\_\_\_

Drew Brees threw 3 interceptions. Place a point on 3. How far is Aaron Rodgers away from the mean? \_\_\_\_\_

4.) Find the mean absolute deviation.

Add the differences from the mean together: \_\_\_\_\_ + \_\_\_\_\_ + \_\_\_\_\_ + \_\_\_\_\_ + \_\_\_\_\_ = \_\_\_\_\_

Divide the sum by the total numbers in the set: \_\_\_\_\_ ÷ \_\_\_\_\_ = \_\_\_\_\_

MAD = \_\_\_\_\_

This activity contributed to starting conversations on a real life situation (basketball) to which they could relate to. We have been able to talk about the variability in basketball scores in a fairly natural way. Cié gave more meaning to the medium absolute deviation they were calculating. I was very surprised to discover that the development of an understanding of the concept of statistical variability is now part of the common state standards of grade 6 in mathematics. At best, this was previously a topic in high school statistics courses and not part of middle school mathematics. The purpose of this post is to help you help your students overcome their confusion with an average deviation media and understand which variability is using my concept of basketball scores. I created a variability in the basketball activity that you can download and use in the classroom. It would also be an excellent exercise to do during the days of professional development with some of your colleagues to strengthen your collective skills in this sector. It should also be noted that the names used for this activity are gender neutral. Chris and Terry could be male or females. If you are interested in dealing with the assumptions of the students on the genre, listen carefully to their use of pronouns (he/her) while discussing this activity. It helps middle school students to understand the variability - there that the current standards ask students - the two main topics in the study of basic statistics are at the center and the diffusion. The mathematics of the middle school has always included the study of the measures of the center (media, median and modalities), but the idea of studying the diffusion (variability) is new in the curriculum, in particular for teachers who have not necessarily studied statistics in detail. What is variability? Variability describes how a data set changes from element to element. Variability measures describe the degree and quantity of variation within the data set. There are two ways that the oneAsk the elementary elementary students to calculate the variability: the interquartile range and the average deviation. When I taught the mathematics of the eighth, ninth and tenth degree, we often made conspiracies of boxes and whiskers when I studied the statistics and the idea of the interquartile range was a topic on which we touched, at those levels of degree. The current standards ask us to go more deeply that simply by performing calculations like these, all the sense of helping students understand what variability is. What is Mena's deviation? The new topic for the teachers and students of middle schools is the average deviation. An absolute deviation describes the variation in a data set and it is the average distance between each data value and the average. It can be calculated by finding the difference in any data value and the vehicle and then finding the average of this. An absolute deviation reveals how "spread" the values are and how much the data vary. Here is an example to help promote understanding this topic and variability (spread). Variability calculation: the example of basketball about the Chris and Terry plot are basketball players. After the first eight games of the season, the coach analyzes their performance and creates a line of the number of baskets that each player has marked during these games. After the first eight matches of the seasons, they made the following number of baskets: analyze the plot of the line if the center measures are calculated using the vehicle and the median, it turns out that Chris and Terry have means of 9.5 baskets per game and a median of 9.5 baskets per game. Looking at only these center measures without looking at the line plot, we could assume that these players perform equally well on the basketball court. However, this is not the case. In fact, the players are enough and have students (or other teachers, if you use this for professional development) explain how different they can help led atidnorporda azneconoc anU .elerap id melorp
